Professional Summary

Hi, I'm a passionate Web Developer & Designer with a focus on building clean, responsive, and user-friendly websites. I specialize in both front-end and back-end development, creating dynamic web experiences that not only look great but perform seamlessly across devices.

With a strong foundation in HTML, CSS, JavaScript, XML, Java, React, Node.js, Express, PHP, and database systems like MongoDB and MySQL, I craft full-stack solutions tailored to client needs. I also bring design to life using Bootstrap and Tailwind CSS, ensuring every interface is both functional and visually engaging.

Since 2023, I've developed a diverse range of web projects — from personal portfolios and landing pages to full-stack web apps and admin dashboards. My experience includes working on real-world freelance projects where I handled everything from UI/UX design to backend APIs and deployment.

I'm currently open to freelance opportunities and collaborations — whether you're a business looking to grow online or a creative needing a solid digital presence, I'm here to help turn ideas into reality. Let's build something great together.
